

EXTEND THE LIFE OF YOUR NON-MAG COLLAR

DON'T SPEND EXTRA MONEY ON A NEW DRILL COLLAR WHEN OUR STUB WELDING SERVICE CAN GET YOU UP AND RUNNING FOR LESS.

Throughout the course of any drill collar's lifespan, things like the repeated reworking of connections can shorten tools to unworkable lengths. Stabil Drill offers stub welding services so these tools can be repaired and put back into service—reliably and cost-effectively restoring them to their proper physical dimensions and acceptable values.

EXTENDS TOOL LIFE CYCLE

These non-mag drill collars are some of your most expensive BHA components. Stabil Drill's stub welding services can get these tools ready for action and back in service, helping your operation get the most out of them.

MAKE THE MOST OF YOUR CAPITAL

If it's not the time to buy a new collar, don't set aside the funds for it. Now is the time to put your money where it matters the most, when the cost to stub weld a collar is a fraction of the cost of a new one.

EXCEPTIONAL STANDARDS

Stabil Drill is qualified to weld P530 and P550 or equivalent grade non-magnetic austenitic stainless steel. Our welding procedures WPS, PQR & WOPQ are written and performed in accordance to ASME Section IX.

A REPUTATION FOR EXCELLENCE

When it comes to reliable solutions for short non-mag drill collar inventory, call Stabil Drill. We're trusted throughout the industry for our engineering experience and quality facilities.
